

The Name Game

OBJECTIVE

The students will be able to sound and recognize the letters that begin the names of animals and place the animals with the same letters into groups.

MATERIALS

per class or student group:

- enlarged photocopies of California sea lion, harbor seal, Pacific walrus, and northern elephant seal illustrations (*Pinniped Picks*, pages 6 and 7)
- scissors
- 26 milk cartons
- ocean and land animal pictures from magazines

ACTION

1. To prepare for this activity, cut out animals from magazines and photocopy the images from the *Pinniped Picks* cards.
2. Place all pictures on a table or distribute them to student learning groups.
3. Ask students to name the animals that they know. Introduce those animals new to students. Which animals live in the ocean? Which animals live on land? Can some of the animals live on land and in the ocean?
4. As a class or in student groups, sort the animals according to the first letter in each animal's name. Place like-letter animals in a milk carton and write the letter on the front. Arrange the cartons alphabetically. There will probably be some missing letters. Can the students name which ones?

DEEPER DEPTHS

Using the animals in the letter cartons, have students choose a favorite and tell a imaginary or real story about that animal. As an extra challenge, can a student create a story using all the animals in a letter carton?

The name walrus comes from the Danish word hvalros, meaning sea horse.

Pinned Picks

California sea lion

Zalophus californianus californianus

Use these cards to help your students get started exploring pinnipeds. Here are some ideas for ways to use these cards in your classroom:

- Use the facts on the cards to help you prepare lesson plans and lead discussions in class.
- Copy and cut apart the cards. Distribute a different card to each learning group. Visit the school library to learn more about the animals. Groups may even adopt that animal as their "mascot" while working on this unit.
- Copy and cut apart the cards. Distribute a complete set to each student or group of students. Students compare similarities and differences among various pinnipeds.
- Copy and cut apart the cards. Use the cards to sort endangered or threatened species from those that are not. Visit the library to find more species to add to your "endangered list." Do some of these animals live in your area?

size: Male to 2.4 m (7.9 ft.) and to 390 kg (860 lb.)
Female to 2 m (6 ft.) and to 110 kg (240 lb.)

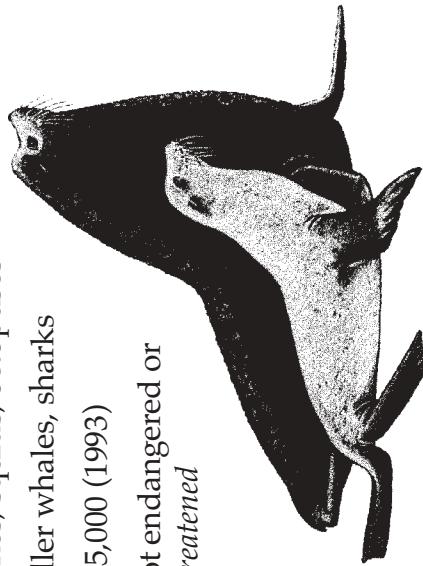

distribution: British Columbia to northern Mexico

prey: fishes, squids, octopuses

predators: killer whales, sharks

population: 185,000 (1993)

status:
not endangered or threatened

harbor seal

Phoca vitulina

size: Male about 1.9 m (6.2 ft.) and 70 to 159 kg (150–351 lb.)
Female about 1.7 m (5.6 ft.) and 60 to 110 kg (132–242 lb.)

distribution: Pacific (Arctic to Baja California, Mexico), Atlantic (Greenland to Florida), and European waters

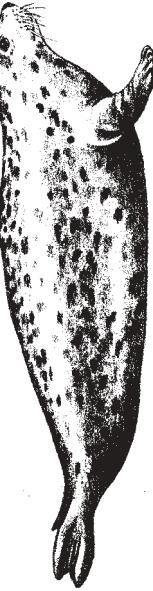

prey: fishes, shrimps, squids, octopuses

predators: killer whales, sharks, and Steller sea lions.

Coyotes and eagles eat juveniles.

population: 500,000 (1981)

status: not endangered or threatened

Pacific walrus

Odobenus rosmarus divergens

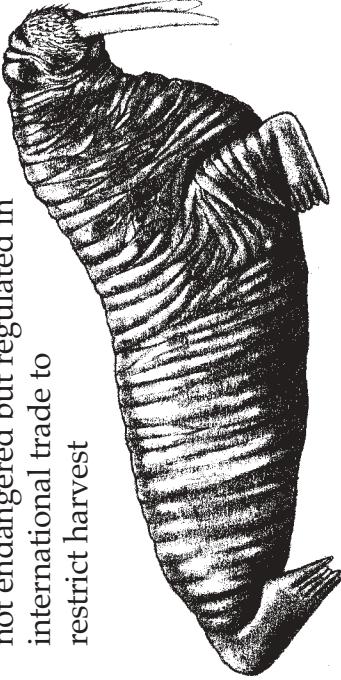

size: Male to 3.6 m (11.8 ft.) and to 1,900 kg (4,189 lb.)
Female to 3 m (10 ft.) and to 1,200 kg (2,646 lb.)

distribution: northeastern Pacific and Arctic oceans
prey: clams, mussels, fishes, snails, crabs, shrimps, and squids. Some eat seals and small whale carcasses.

predators: killer whales, polar bears

population: 240,000 (1980s)

status: not endangered but regulated in international trade to restrict harvest

Steller sea lion

Eumetopias jubatus

size: Male 3.3 m (10.8 ft.); 1,000 kg (2,200 lb.)
Female 2.5 m (8.2 ft.); 270 kg (600 lb.)
distribution: central California north to the Arctic and across to Japan

prey: fishes, squids, octopuses. Some eat seals.
predators: killer whales, sharks
population: 95,000 to 122,000
status: Gulf of Alaska and Bering Sea populations endangered under the Endangered Species Act. Eastern stock is threatened.

northern elephant seal

Mirounga angustirostris

size: Male 4 m (13 ft.) 2,000 kg (4,410 lb.)
Female to 3 m (10 ft.); 600 kg (1,323 lb.)
distribution: California to Baja, California, Mexico

prey: squids, octopuses, deep-water fishes, small sharks and skates
predators: killer whales, sharks
population: 150,000 (late 1990s)
status: not endangered or threatened

Guadalupe fur seal

Arcoticephalus townsendi

size: Male to 1.9 m (6.2 ft.); to 170 kg (375 lb.)
Female to 1.4 m (4.6 ft.); to 55 kg (121 lb.)
distribution: central California to Guadalupe Island, Mexico

prey: fishes, squids
predators: killer whales, sharks
population: 6,000 (1987)
status: classified as threatened under the Endangered Species Act

Hawaiian monk seal

Monachus schauinslandi

size: to 2.4 m (8 ft.); 270 kg (600 lb.) females slightly larger than males
distribution: northwestern Hawaiian Islands (leeward chain)

prey: eels and other fishes, octopuses, lobsters
predators: sharks
population: about 1,500 (early 1990s)
status: classified as endangered under the Endangered Species Act
