

# SeaWorld/Busch Gardens Invertebrates

9-12 Classroom Activities

### Invertebrate Survivor

#### **OBJECTIVE**

The student will correlate genus and species name with the common name of various invertebrates. The student will identify the anatomy of an invertebrate. The student will identify various facts about invertebrates.

#### ACTION

- 1. Divide the class into two equal groups. The two teams should be even, if there is an odd number of students have one of them volunteer to help the teacher run the game.
- 2. Ask each team to name themselves after an invertebrate.
- 3. Explain the rules of play as follows: The two teams will play against one another. There will be a series of Invertebrate challenges. If a team wins a challenge, they do not have to vote any of their fellow teammates out of the game. However, if a team loses a challenge, they must vote some of their teammates out of the game. The number of students voted out after each challenge will depend on the size of the class. The voting instructions listed below gives instructions on how to calculate how many students should be eliminated after each challenge according to class size. The students that are voted out of the game will have a seat on the judges' panel. Eventually the panel of judges will determine the final winner of Invertebrate Survivor. During a voting session, each student can ONLY vote for someone else, they CANNOT vote for themselves.

#### **Voting Instructions**

These voting instructions are for a class of 24 students. However, any size class can be adapted into this model by modifying the number of people that are eliminated during the first three challenges and the last three. Generally, with class sizes larger than 24 students, more than three students should be eliminated after each challenge. Conversely, with a class smaller than 24 students, less than three students should be eliminated after each challenge. The merge between the two teams is after the third challenge and there shouldn't be more than five candidates for the judges to choose from after the sixth challenge.

Class size of 24: The team that loses a challenge will vote THREE members out of the game. Once the total number of students from both teams is 15 (this will happen after the third challenge), the two teams will merge into one new team. Together the

new team will decide on another invertebrate name to call themselves. The next series of challenges (four through six) are going to be evaluated on an individual basis. FOUR students will be eliminated from the game after each challenge. The students are not voted out by their fellow teammates at this point, they are eliminated if they come into the last four places from each challenge. After the sixth challenge, there should be three students left. The judges' panel will determine from those three who becomes the Invertebrate survivor.

4. Begin the game by starting the first challenge. Refer to the first challenge's directions and instruct students accordingly. The answers may be checked by using the Teacher's Guide. The voting process begins for the team who loses the challenge. The voting process is initiated by every team member writing down three of their teammates names that they feel should be eliminated from the game. Votes should be cast confidentially. The three people that receive the most votes are eliminated.

In the event of a tie, the decision will be determined by the Invertebrate Spelling Challenge. The students that are involved in the tie will draw an invertebrate name and have to spell it backwards(without reading their slips of paper). The word must be spelled correctly the first time. The student(s) (depending on how many elimination spaces have to be filled) that spell their word the slowest or do not spell it correctly the first time are eliminated.

- 5. Repeat step 4 for challenge two and challenge three.
- 6. Merge the two groups together after the third challenge (when the two groups together equal 15). The team should rename themselves since they are a new group.
- 7. Explain that the rest of the challenges are going to be conducted on an individual basis and instead of three eliminations after each challenge there are now four! The team members that fall into the last four places with each challenge are eliminated. The answers to the challenges are in the Teacher's Guide. This process is repeated for challenges four through six. In the event of a tie, the Invertebrate Spelling Challenge is conducted to make the decision.
- 8. The sixth challenge is the last event and the students remaining after the elimination are considered to be "invertebrate finalists." (There should be three students left if the class started with 24 students).
- 9. Instruct the invertebrate finalists to make a 1-minute speech to the judging panel about why they should be the sole Invertebrate Survivor. The judges will cast their votes for the student they think should be the SOLE Invertebrate Survivor.

#### **MATERIALS**

#### Per class:

- copy of *Challenge Packet* (see **Preparation**)
- one Teacher's Guide
- two stop watches
- one pencil per student
- one *Invertebrate Spelling Challenge* Funsheet
- large bowl

#### REPARATION

Make the following copies of the Challenge Packet:

- 2 copies of Challenges 1-3
- 12 or more copies (half class size) of Challenges 4-6

Cut and fold the names from the Invertebrate Spelling Challenge Funsheet and place them in a bowl for the random drawing. This is used in the event of a tie.

#### **CRYPTO-FACT**

Directions: The following facts are related to various invertebrates. However, these facts are written in code where one letter actually stands for another. Listed below are a few hints to help solve the CRYPTO-FACT. The team that solves the most CRYPTO-FACTS in ten minutes wins the challenge!

#### Hints:

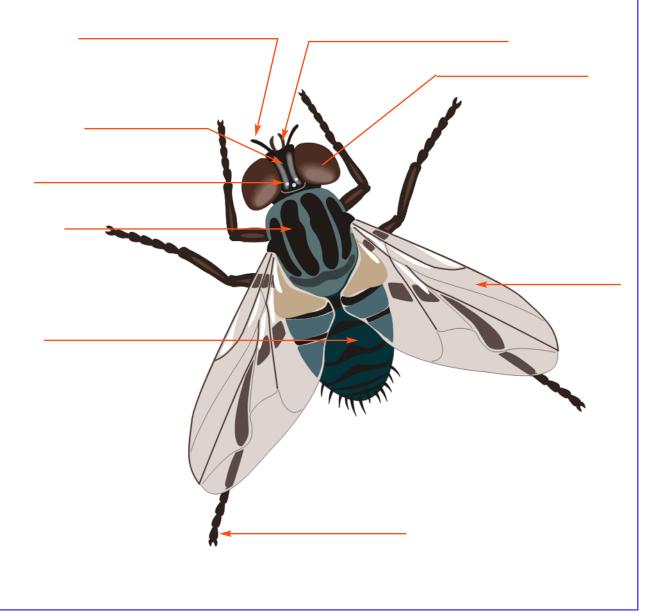

- · The letter "O" in the CRYPTO-FACT stands for the letter "T"
- The letter "M" in the CRYPTO-FACT stands for the letter "X"
- The letter "U" in the CRYPTO-FACT stands for the letter "G"
- The letter "R" in the CRYPTO-FACT stands for the letter "E"
- · The length and formation of the words are all hints.
- · If you solve one of the CRYPTO-FACTS, the letters from that fact can be used to determine all the others since all the facts have the same code.

1.	1. VIERTOE ZPKR OZNRR QJSG ERUDRIOE TPWWRS ZRPS, OZJNPM, PIS PQSJDRI.

_	 		

Directions: Label the fly diagram with their corresponding parts listed below. The team that has the most correct matches in five minutes wins the challenge.

abdomen
antenna
compound eye
wing
simple eye

head mandibles leg thorax

Directions: Answer the following questions. The team that has the most correct answers in 10 minutes wins, the challenge.

- 1. Praying mantises belong to what phyla?
  - A. Chordata
  - B. Arthropoda
  - C. Mollusca
  - D. Lycopodiophyta
- 2. Which of the following is the smallest insect?
  - A. hairy winged beetle
  - B. ladybug
  - C. fruit fly
  - D. katydid
- 3. What are the three main body parts of an insect?
  - A. eye, head, and abdomen
  - B. brain, thorax, and abdomen
  - C. head, antennae, and thorax
  - D. head, thorax, and abdomen
- 4. How many legs does an insect have on its thorax?
  - A. two
  - B. four
  - C. six
  - D. eight
- 5. All of the following are insects EXCEPT?
  - A. pillbug
  - B. dragonfly
  - C. mosquito
  - D. lubber
- 6. The class Chelicerata includes all of the following EXCEPT.
  - A. scorpions
  - B. spiders
  - C. horseshoe crabs
  - D. hermit crabs
- 7. The only arthropods that lack antennae belong to which group of animals?
  - A. Myriapoda
  - B. Chelicerata
  - C. Crustacea
  - D. Insecta
- 8. Tape worms and flat worms belong to what phlya?
  - A. Platyhelminthes
  - B. Annelida
  - C. Cnidaria
  - D. Porifera

- 9. The exoskeleton of an invertebrate comprises all of the following EXCEPT?
  - A. sclerotin
  - B. wax
  - C. chitin
  - D. keratin
- 10. Spiracles (holes in the exoskeleton) open to the tracheal tube for which of the following purposes?
  - A. digestion
  - B. respiration
  - C. excretion
  - D. sensation
- 11. All of the following insects vary in color from males to females EXCEPT?
  - A. dragonflies
  - B. sawflies
  - C. grasshoppers
  - D. ladybugs
- 12. Which of the following tells the 4 stages of complete metamorphosis?
  - A. egg, nymph, cocoon, adult
  - B. egg, larva, pupa, adult
  - C. egg, cocoon, pupa, adult
  - D. egg, pupa, juvenile, adult
- 13. All of the following are useful products that insects make EXCEPT?
  - A. Silk
  - B. Plastic
  - C. Shellac
  - D. Wax
- 14. Which of the following is an example of incomplete metamorphosis?
  - A. mealworm to beetle
  - B. caterpillar to butterfly
  - C. juvenile roach to winged adult
  - D. egg to honeybee
- 15. Which of the following is an advantage to having an exoskeleton?
  - A. prevents water loss
  - B. provides attachment for muscles
  - C. Provides expansion capabilities for growth
  - D. both A and B

Directions: Some invertebrates are beneficial to environment while others could be harmful. Match the benefit or problem from column A to their corresponding invertebrate in column B by drawing a line. Note: Some benefits or problems in Column A may use more than one answer in Column B. The students that have the most correct matches in five minutes will move onto the next round.

COLUMN A COLUMN B

bubonic plague Tsetse fly (Genus: Glossina)

Lyme disease Trypanosoma cruzi (protozoan)

flower pollinator Black Widow Spider (Latrodectus hesperus)

malaria Bumblebee (Bombus morrisoni)

yellow fever Ladybug (Coccinella septempunctata)

If bitten, toxin attacks
Corkscrew-shaped bacteria carried by
the nervous system
the black-legged tick (*Ixodes scapularis*)

predator of more harmful insects Flea (*Xenopsylla cheopis*)

sleeping sickness Butterfly (Danaus plexippus)

encephalitis Mosquito (Genus: Aedes)

American Trypanosomiasis or Mosquitos in the Genera *Aedes* and

Chagas' Disease Culex

Praying Mantis (Tenodera aridifolia sinensis)

Protozoans that are transmitted by the

*Anopheles* mosquito

**Directions:** Even though about 90% of the world's animal species are invertebrates, some invertebrate populations are at risk for becoming extinct. Identify each insect listed below as either at risk ("**R**") or common ("**C**") by writing the initial in the blank provided. The students that have the most correct answers in five minutes will move onto the next round.

#### **INSECT LIST**

2. Delta green ground beetle, Elaphrus viridis	1.	American burying beetle, <i>Nicrophorus americanus</i>
4. Northeastern beach tiger beetle, Cicindela dorsalis dorsalis  5. Puritan tiger beetle, Cicindela puritana  6. Tooth cave beetle, Rhadine persephone  7. Southeastern lubber, Romalea microptera  8. Bay checkerspot butterfly, Euphydryas editha bayensis  9. Corsican swallowtail, Papilio hospiton  10. Desert Locust, Schistocerca gregaria  11. Homerus swallowtail, Papilio homerus  12. Karner blue butterfly, Lycaeides melissa samuelis  13. Lange's metalmark butterfly, Apodemia momio langei  14. Earwig, Forticula auricularia  15. Luzon peacock swallowtail, Papilio chikae  16. Spotted snake millipede, Blaniulus guttulatus  17. Chinese praying mantis, Tenodera aridifolia  18. Myrtle's silverspot, Speyeria zerene myrtleae  19. Oregon silverspot butterry, Speyeria zerene hippolyta  20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis  21. Queen Alexandra's birdwing, Ornithoptera alexandrae  22. San Bruno elfin butterfly, Incisalia mossii bayensis  23. Lincarwinged grasshopper, Aptenopedes sphenariodes  24. Southeastern field cricket, Gryllus rubens  25. Seaside earwig, Anisolabis maritima  26. African millipede, Archespirostreptus sp.  27. Ash meadows naucorid, Ambrysus amargosus  28. Madagascar hissing cockroach, Gromphadorhina portentosa  29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis  30. Monarch Butterfly, Danaus plexippus  31. Vivid Dancer, Argia vivida  32. Ground-hopper, Tetrix undulata  33. Ground-hopper, Tetrix undulata  34. Robber Fly, Megaphorus willistoni  35. Quiet-ealling katydids, Meconema thalassinum  Viceroy, Limenitis archippus	2.	Delta green ground beetle, <i>Elaphrus viridis</i>
5. Puritan tiger beetle, Cicindela puritana	3.	Two-lined Spittlebug, <i>Prosapia bicincta</i>
6. Tooth cave beetle, Rhadine persephone 7. Southeastern lubber, Romalea microptera 8. Bay checkerspot butterfly, Euphydryas editha bayensis 9. Corsican swallowtail, Papilio hospiton 10. Desert Locust, Schistocerca gregaria 11. Homerus swallowtail, Papilio homerus 12. Karner blue butterfly, Lycaeides melissa samuelis 13. Lange's metalmark butterfly, Apodemia momio langei 14. Earwig, Forticula auricularia 15. Luzon peacock swallowtail, Papilio chikae 16. Spotted snake millipede, Blaniulus guttulatus 17. Chinese praying mantis, Tenodera aridifolia 18. Myrtle's silverspot, Speyeria zerene myrtleae 19. Oregon silverspot butterry, Speyeria zerene hippolyta 20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis 21. Queen Alexandra's birdwing, Ornithoptera alexandrae 22. San Bruno elfin butterfly, Incisalia mossii bayensis 23. Linearwinged grasshopper, Aptenopedes sphenariodes 24. Southeastern field cricket, Gryllus rubens 25. Seaside earwig, Anisolabis maritima 26. African millipede, Archespirostreptus sp. 27. Ash meadows naucorid, Ambrysus amargosus 28. Madagascar hissing cockroach, Gromphadorhina portentosa 29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis 30. Monarch Butterfly, Danaus plexippus 31. Vivid Dancer, Argia vivida 32. Ground Hopper, Tetrix undulata 33. Ground-hopper, Tetrix undulata 34. Robber Fly, Megaphorus willistoni 35. Quiet-calling katydids, Meconema thalassinum 36. Viceroy, Limenitis archippus	4.	Northeastern beach tiger beetle, Cicindela dorsalis dorsalis
7. Southeastern lubber, Romalea microptera  8. Bay checkerspot butterfly, Euphydryas editha bayensis  9. Corsican swallowtail, Papilio hospiton  10. Desert Locust, Schistocerca gregaria  11. Homerus swallowtail, Papilio homerus  12. Karner blue butterfly, Lycaeides melissa samuelis  13. Lange's metalmark butterfly, Apodemia momio langei  14. Earwig, Forticula auricularia  15. Luzon peacock swallowtail, Papilio chikae  16. Spotted snake millipede, Blaniulus guttulatus  17. Chinese praying mantis, Tenodera aridifolia  18. Myrtle's silverspot, Speyeria zerene myrtleae  19. Oregon silverspot butterry, Speyeria zerene hippolyta  20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis  21. Queen Alexandra's birdwing, Ornithoptera alexandrae  22. San Bruno elfin butterfly, Incisalia mossii bayensis  23. Linearwinged grasshopper, Aptenopedes sphenariodes  24. Southeastern field cricket, Gryllus rubens  25. Seaside earwig, Anisolabis maritima  26. African millipede, Archespirostreptus sp.  27. Ash meadows naucorid, Ambrysus amargosus  28. Madagascar hissing cockroach, Gromphadorhina portentosa  29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis  30. Monarch Butterfly, Danaus plexippus  31. Vivid Dancer, Argia vivida  32. Ground Mantid, Litaneutria minor  33. Ground-hopper, Tetrix undulata  34. Robber Fly, Megaphorus willistoni  35. Quiet-calling katydids, Meconema thalassinum  36. Viceroy, Limenitis archippus	5.	Puritan tiger beetle, Cicindela puritana
8. Bay checkerspot butterfly, Euphydryas editha bayensis	6.	Tooth cave beetle, <i>Rhadine persephone</i>
9. Corsican swallowtail, Papilio hospiton	7.	Southeastern lubber, Romalea microptera
10. Desert Locust, Schistocerca gregaria	8.	Bay checkerspot butterfly, Euphydryas editha bayensis
11. Homerus swallowtail, Papilio homerus	9.	Corsican swallowtail, Papilio hospiton
12. Karner blue butterfly, Lycaeides melissa samuelis  13. Lange's metalmark butterfly, Apodemia momio langei  14. Earwig, Forticula auricularia  15. Luzon peacock swallowtail, Papilio chikae  16. Spotted snake millipede, Blaniulus guttulatus  17. Chinese praying mantis, Tenodera aridifolia  18. Myrtle's silverspot, Speyeria zerene myrtleae  19. Oregon silverspot butterry, Speyeria zerene hippolyta  20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis  21. Queen Alexandra's birdwing, Ornithoptera alexandrae  22. San Bruno elfin butterfly, Incisalia mossii bayensis  23. Linearwinged grasshopper, Aptenopedes sphenariodes  24. Southeastern field cricket, Gryllus rubens  25. Seaside earwig, Anisolabis maritima  26. African millipede, Archespirostreptus sp.  27. Ash meadows naucorid, Ambrysus amargosus  28. Madagascar hissing cockroach, Gromphadorhina portentosa  29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis  30. Monarch Butterfly, Danaus plexippus  31. Vivid Dancer, Argia vivida  32. Ground Mantid, Litaneutria minor  33. Ground-hopper, Tetrix undulata  34. Robber Fly, Megaphorus willistoni  35. Quiet-calling katydids, Meconema thalassinum  36. Viceroy, Limenitis archippus	10.	Desert Locust, Schistocerca gregaria
13. Lange's metalmark butterfly, Apodemia momio langei  14. Earwig, Forticula auricularia  15. Luzon peacock swallowtail, Papilio chikae  16. Spotted snake millipede, Blaniulus guttulatus  17. Chinese praying mantis, Tenodera aridifolia  18. Myrtle's silverspot, Speyeria zerene myrtleae  19. Oregon silverspot butterry, Speyeria zerene hippolyta  20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis  21. Queen Alexandra's birdwing, Ornithoptera alexandrae  22. San Bruno elfin butterfly, Incisalia mossii bayensis  23. Linearwinged grasshopper, Aptenopedes sphenariodes  24. Southeastern field cricket, Gryllus rubens  25. Seaside earwig, Anisolabis maritima  26. African millipede, Archespirostreptus sp.  27. Ash meadows naucorid, Ambrysus amargosus  28. Madagascar hissing cockroach, Gromphadorhina portentosa  29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis  30. Monarch Butterfly, Danaus plexippus  31. Vivid Dancer, Argia vivida  32. Ground Mantid, Litaneutria minor  33. Ground-hopper, Tetrix undulata  34. Robber Fly, Megaphorus willistoni  35. Quiet-calling katydids, Meconema thalassinum  36. Viceroy, Limenitis archippus	11.	Homerus swallowtail, <i>Papilio homerus</i>
14. Earwig, Forticula auricularia 15. Luzon peacock swallowtail, Papilio chikae 16. Spotted snake millipede, Blaniulus guttulatus 17. Chinese praying mantis, Tenodera aridifolia 18. Myrtle's silverspot, Speyeria zerene myrtleae 19. Oregon silverspot butterry, Speyeria zerene hippolyta 20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis 21. Queen Alexandra's birdwing, Ornithoptera alexandrae 22. San Bruno elfin butterfly, Incisalia mossii bayensis 23. Linearwinged grasshopper, Aptenopedes sphenariodes 24. Southeastern field cricket, Gryllus rubens 25. Seaside earwig, Anisolabis maritima 26. African millipede, Archespirostreptus sp. 27. Ash meadows naucorid, Ambrysus amargosus 28. Madagascar hissing cockroach, Gromphadorhina portentosa 29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis 30. Monarch Butterfly, Danaus plexippus 31. Vivid Dancer, Argia vivida 32. Ground Mantid, Litaneutria minor 33. Ground-hopper, Tetrix undulata 34. Robber Fly, Megaphorus willistoni 35. Quiet-calling katydids, Meconema thalassinum 36. Viceroy, Limenitis archippus	12.	Karner blue butterfly, Lycaeides melissa samuelis
15. Luzon peacock swallowtail, Papilio chikae  16. Spotted snake millipede, Blaniulus guttulatus  17. Chinese praying mantis, Tenodera aridifolia  18. 77	35.	Quiet-calling katydids, Meconema thalassinum
37. Emperor Scorpion, <i>Pandinus imperator</i>	36.	Viceroy, Limenitis archippus
	37.	Emperor Scorpion, Pandinus imperator

Directions: Match the common name in the left column to its *genus species* name in the right column by number. The students with the most correct matches will prepare to make their speeches about "Why They Should Become the Sole Invertebrate Survivor."

<b>Example</b> : numan	<u>21</u>	21) Homo sapien
COMMON NAME	C	GENUS SPECIES
bumblebee		1) Somatochlora incurvata
butterfly		2) Aphonopelma chalcodes
ant		3) Pandinus imperator
dragonfly		4) Romalea microptera
scorpion		5) Henricia aspera
praying mantis		6) Scarabaeus sacer
ladybug		7) Latrodectus mactans
tarantula		8) Photinus pyralis
lobster		9) Melanoplus regalis
lubber		10) Bombus morrisoni
millipede		11) Coccinella septempunctata
dung beetle		12) Strongylocentrotus franciscanus
cockroach		13) Gromphadorhina portentosa
earthworm		14) Cirripedia verrucomorpha
firefly		15) Danaus plexippus
black widow spider		16) Scaphiostreptus paralis acuticonus
grasshopper		17) Homarus americanus
sea star		18) Tetramorium caespitum
barnacle		19) Allolobophora chlorotica
sea urchin		20) Tenodera aridifolia sinensis

# Invertebrate Spelling Challenge Funsheet

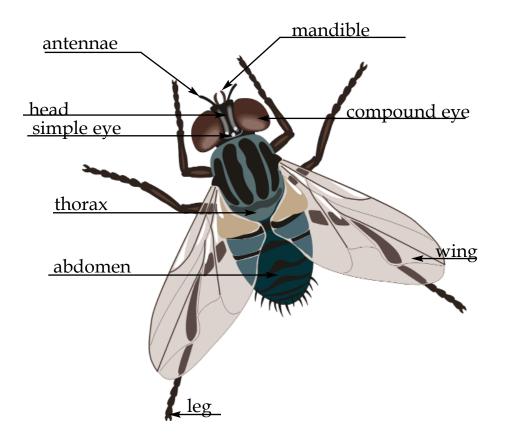

invertebrate	mosquito
ladybug	millipede
dragonfly	butterfly
praying mantis	bumblebee
scorpion	tarantula
earthworm	lobster
caterpillar	cricket
insect	arthropod
sea anemone	horsefly

# Teacher's Guide Challenge 1 Answers

- 1. Insects have three body segments called head, thorax, and abdomen.
- 2. Fleas are wingless.
- 3. Spiders have two body segments called cephalothorax and abdomen.
- 4. Arthropods have exoskeletons, jointed legs, and segmented bodies.
- 5. Holes in the exoskeleton used for respiration are called spiracles.

### Challenge 2 Answers

- · Abdomen: Last of three segments of a fly.
- · Antenna: One of two sensory appendages attached to the head of flies.
- · Compound Eye: One of two large eyes that are composed of many hexagonal lenses.
- · Wing: One of the two large, upper wings that are attached to the thorax.
- · Head: The head is the part of the fly that contains the brain, eyes, mandibles, and antennae.
- · Mandibles: a pair of jaws located on the lower sides of the head. Mandibles are used to carry objects and bite.
- · Simple Eye: Small eyes located between the compound eyes. These eyes detect light from dark.
- · Thorax: The mid-body segment between the head and abdomen.
- · Legs: Insects have 6 jointed legs attached to the thorax.

### Challenge 3 Answers

- 1. Which of the following Phylums do praying mantises belong to?
  - **B.** Arthropoda is the animal phylum in which insects (praying mantis), spiders, crustaceans, spiders, scorpions, and centipedes belong. They have exoskeletons, jointed legs, and segmented bodies.
  - Chordata is the animal phylum in which humans and many other vertebrates belong. Lycopodiophyta is the phylum in which vascular plants belong. Mollusca is the in which phylum of soft-bodied un-segmented animals belong.
- 2. Which of the following is the smallest insect? Some of the **A. hairy winged beetles** are barely one-hundredth of an inch in length and they are smaller than a ladybug or fruit fly.
- 3. What are the three main body parts of an insect?
  - D. Head, thorax, and abdomen
- 4. How many legs does an insect have on its thorax?
  - C. Six
- The exoskeleton of an invertebrate comprises all of the following EXCEPT?
   Keratin. Many vertebrates have their hair, nails, scales, etc. comprised out of
  - keratin. Sclerotin has proteins, wax prevents water loss, and chitin is durable substance that creates the hard surface of arthropods.
- 6. Spiracles (holes in the exoskeleton) open to the tracheal tube for which of the following purposes?
  - **B. Respiration.** The spiracles' function is for respiration.
- 7. All of the following are insects EXCEPT?
  - **A. Pillbugs.** Pillbugs are not insects, they are belong to the class crustacea. In general insects are composed of three body segments (head, thorax, and abdomen), three pairs of legs, and two pairs of wings.
- 8. The class Chelicerata includes all of the following EXCEPT.
  - **D.** Hermit crabs Hermit crabs belong to the class crustacea because they are true crabs.
- 9. The only arthropods that lack antennae belong to which of the following groups of animals?
  - **B.** Chelicerata. Members of chelicerata (scorpions, spiders, etc.) do not have antennae and they are the only arthropods that lack them.
- 10. Tape worms and flat worms belong to which of the following phyla?
  - **A. Platyhelminthes.** Sponges belong to the phylum Porifera; jellyfish, corals, and sea anemones belong to Cnidaria; segmented worms (polychates) belong to the phylum Annelida.
- 11. All of the following insects vary in color from males to females EXCEPT?
  - D. Ladybugs

- 12. Which of the following represents the 4 stages of complete metamorphosis?
  - **B.** Egg, larva, pupa, and adult. Metamorphosis means a change of body form and appearance. An invertebrate's outer coating is hard and cannot expand as the invertebrate grows. The coating must split, with a new larger one forming underneath. Complete metamorphosis has 4 stages of growth, egg, larva, pupa and adult. In complete metamorphosis the insect changes its shape completely.
- 13. All of the following are useful products that insects make EXCEPT?B. Plastic. Plastic is a man-made substance whereas silk, shellac and wax can all be derived from various types of insects.
- 14. Which of the following is an example of incomplete metamorphosis?
  - **C. Juvenile roach to winged adult.** Incomplete metamorphosis has three stages: egg, nymph, and adult. The insects hatch from their eggs looking like tiny versions of the adults. A juvenile roach looks like a tiny version of the winged adult whereas all the other examples are examples of complete metamorphosis. Complete metamorphosis involves a distinct change in appearance and form from beginning to end.
- 15. Which of the following is an advantage to having an exoskeleton?
  - **D. Both A & B**. Prevention of water loss and provision for muscle attachment are both advantages to having exoskeleton. The exoskeleton provides a place for muscle attachment, allowing much greater leverage than attachment to an internal skeleton. This explains the apparent greater muscular strength of insects. Once an exoskeleton is formed and hardened, it is not elastic, and does not allow for growth. It must be shed and a new larger exoskeleton made.

### Challenge 4 Answers

bubonic plague: flea (Xenopsylla cheopis)

malaria: Protozoans that are transmitted by the *Anopheles* mosquito

Lyme Disease: Corkscrew-shaped bacteria carried by the black-legged tick (Ixodes

scapularis)

If bitten, toxin attacks nervous system: black widow spider (*Latrodectus hesperus*) flower pollinator: bumblebee (*Bombus morrisoni*) and butterfly (*Danaus plexippus*)

yellow fever: Mosquito (Genus: Aedes)

encephalitis: mosquitos in the Genera Aedes and Culex

sleeping sickness: Tsetse fly (Genus: Glossina)

trypanosomiasis or Chagas' Disease: Trypanosoma cruzi (protozoan)

acts as a predator of more harmful insects: praying mantis (Tenodera aridifolia sinensis)

and ladybug (Coccinella septempunctata)

#### Challenge 5 Answers

- 1. American burying beetle, *Nicrophorus americanus*, **R**
- 2. delta green ground beetle, *Elaphrus viridis*, **R**
- 3. two-lined spittlebug, *Prosapia bicincta*, C
- 4. northeastern beach tiger beetle, Cicindela dorsalis dorsalis, R
- 5. puritan tiger beetle, Cicindela puritana, **R**
- 6. tooth cave beetle, Rhadine persephone, R
- 7. southeastern lubber, Romalea microptera, C
- 8. bay checkerspot butterfly, Euphydryas editha bayensis, R
- 9. Corsican swallowtail, *Papilio hospiton*, **R**
- 10. desert locust, Schistocerca gregaria, C
- 11. Homerus swallowtail, *Papilio homerus*, **R**
- 12. Karner blue butterfly, Lycaeides melissa samuelis, R
- 13. Lange's metalmark butterfly, *Apodemia momio langei*, **R**
- 14. earwig, Forticula auricularia, C
- 15. Luzon peacock swallowtail, Papilio chikae, R
- 16. spotted snake millipede, *Blaniulus guttulatus*, C
- 17. Chinese praying mantis, Tenodera aridifolia, C
- 18. myrtle's silverspot, Speyeria zerene myrtleae, R
- 19. Oregon silverspot butterry, Speyeria zerene hippolyta, R
- 20. Palos Verdes blue, Glaucopsyche lygdamus palosverdesensis, R
- 21. Queen Alexandra's birdwing, Ornithoptera alexandrae, R
- 22. San Bruno elfin butterfly, *Incisalia mossii bayensis*, **R**
- 23. linearwinged grasshopper, Aptenopedes sphenariodes, C
- 24. southeastern field cricket, Gryllus rubens, C
- 25. seaside earwig, Anisolabis maritima, C
- 26. African millipede, Archespirostreptus sp., C
- 27. ash meadows naucorid, Ambrysus amargosus, R
- 28. Madagascar hissing cockroach, Gromphadorhina portentosa, C
- 29. Delhi sands flower-loving fly, Rhaphiomidas terminatus abdominalis, R
- 30. monarch butterfly, Danaus plexippus, C
- 31. vivid dancer, Argia vivida, **R**
